

2025 ANNUAL REPORT

TRUE.
BLUE.
TRANSITION.

joint arrangements are structured through private limited liability companies incorporated in various jurisdictions. Assets and liabilities held in these separate vehicles are those of the separate vehicles and not those of the shareholders of these limited liability companies. Shareholders usually have no direct rights to the assets, nor primary obligations for liabilities of these vehicles. As a result, the Company classifies most of its joint arrangements as joint ventures. Joint ventures are accounted for using the equity method.

When a joint arrangement is structured through a legal form that gives the partners rights to the assets and obligations for the liabilities of the arrangement, or when other terms of the arrangement or other facts and circumstances give the partners rights to its assets and obligations for its liabilities, the Company classifies the interest as a joint operation. The Company recognizes its share of the joint operation's assets, liabilities, income and expenses in the consolidated financial statements.

Investments in associates:

Associates are all entities over which the Company has significant influence. Significant influence is the power to participate in the financial and operating policy decisions of the investee, but it is not control over those policies. Investments in associates are accounted for using the equity method.

When losses of an equity-accounted entity are greater than the value of the Company's net investment in that entity, these losses are not recognized unless the Company has a constructive obligation to fund the entity. The share of the negative net equity of these is first accounted for against the loans held by the owner towards the equity-accounted company that forms part of the net investment. Any excess is accounted for under provisions.

Reciprocal transactions carried out between a subsidiary and an equity-accounted entity are not eliminated for the preparation of the consolidated financial statements. Only transactions leading to an internal profit (e.g. for dividends or internal margin on asset sale) are eliminated, applying the percentage owned in the equity-accounted entity.

The financial statements of the subsidiaries, associates and joint ventures are prepared for the same reporting period as the Company and the accounting policies are in line with those of the Company.

(c) Non-derivative financial assets

The Company's financial assets consist of finance lease receivables, loans to joint ventures and associates and trade and other receivables. The accounting policy on trade and other receivables is described separately.

Finance lease receivables are non-derivative financial assets with fixed or determined payments that are not quoted in an active market.

Loans to joint ventures and associates relate primarily to interest-bearing loans to joint ventures. These financial assets are initially measured at fair value plus transaction costs (if any) and subsequently measured at amortized cost.

The Company classifies its financial assets at amortized cost only if both of the following criteria are met:

- The asset is held within a business model whose objective is to collect the contractual cash flows; and
- The contractual terms give rise to cash flows that are solely payments of principal and interest.

Financial assets are derecognized when the contractual rights to the cash flows from the financial asset expire or have been transferred and the Company has transferred substantially all the risks and rewards of ownership.

(d) Borrowings (bank and other loans) and lease liabilities

Borrowings are recognized on settlement date, being the date on which cash is paid or received. They are initially recognized at fair value, net of transaction costs incurred (transaction price), subsequently measured at amortized cost and classified as current liabilities, unless the Company has an unconditional right to defer settlement of the liability for at least 12 months after the statement of financial position date.

Borrowing costs that are directly attributable to the acquisition, construction or production of a qualifying asset are capitalized into the cost of the asset in the period in which they are incurred. Otherwise, borrowing costs are recognized as an expense in the period in which they are incurred.
