4 FINANCIAL INFORMATION 2025

Deferred tax assets are recognized only to the extent that it is probable that future taxable profit will be available against which the temporary differences can be utilized. Deferred tax is provided for on temporary differences arising on investments in subsidiaries and associates, except where the timing of the reversal of the temporary difference is controlled by the Company and it is probable that the temporary difference will not reverse in the foreseeable future.

(p) Employee benefits

Pension obligations: the Company operates various pension schemes that are generally funded through payments determined by periodic actuarial calculations to insurance companies or are defined as multi-employer plans. The Company has both defined benefit and defined contribution plans:

- A defined benefit plan is a pension plan that defines the amount of pension benefit that an employee will receive on retirement, usually dependent on one or more factors such as age, years of service and compensation.
- A defined contribution plan is a pension plan under which the Company pays fixed contributions to public or private pension insurance plans on a mandatory, contractual or voluntary basis. The Company has no legal or constructive obligation to pay further contributions if the fund does not hold sufficient assets to pay all employees the benefits relating to employee service in the current and prior periods. The contributions to defined contribution plans and multi-employer plans are recognized as an expense in the income statement as incurred.

The liability recognized in the statement of financial position in respect of defined benefit pension plans is the present value of the defined benefit obligation at the statement of financial position date, less the fair value of the plan assets, together with adjustments for unrecognized actuarial gains and losses and past service costs. The defined benefit obligation is calculated periodically by independent actuaries using the projected unit credit method. The present value of the defined benefit obligation is determined by discounting the estimated future cash outflows using interest rates on high-quality corporate bonds that have maturity dates approximating to the terms of the Company's obligations.

The expense recognized within the EBIT comprises the current service cost and the effects of any change, reduction or winding up of the plan. The accretion impact on actuarial debt and interest income on plan assets are recognized under the net financing cost.

Cumulative actuarial gains and losses arising from experience adjustments and changes in actuarial assumptions are recognized immediately in comprehensive income.

Share-based payments: within the Company there are four types of share-based payment plans that qualify as equity settled:

- Restricted Share Unit (RSU);
- Short-term Incentive Program of Bonus Shares and Matching Shares;
- Value Creation Stake (VCS); and
- Ownership Shares.

The estimated total amount to be expensed over the vesting period related to share-based payments is determined by (i) reference to the fair value of the instruments determined at the grant date, and (ii) non-market vesting conditions included in assumptions about the number of shares that the employee will ultimately receive. Main assumptions for estimates are revised at statement of financial position date. Total cost for the period is charged or credited to the income statement, with a corresponding adjustment to equity.

When equity instruments vest, the Company issues new shares, unless the Company has Treasury shares in stock.

Any cancellation of matching shares will lead to an accelerated expense recognition of the total fair value, with a corresponding adjustment to equity.

(q) Trade payables

Trade payables are amounts due to suppliers for goods bought or services received in the ordinary course of business. They are generally due for settlement within a maximum of 90 days and are therefore classified as current. Trade payables are initially recognized at fair value and subsequently measured at amortized cost using the effective interest method.
